**Rig 666 prompts curse tales**

_Hope by the belly is high! I'm going to tell oun this ol' story, "The Curse of Rig No. 666."_ This Ain't No Bull!

The rig was not too old, and had troubles like tuff when it came out of the yard. The drilling company was going to have a special rig, one of the blackest in all of Texas, the 
when they rigged up on an old Indian burial ground in eastern Oklahoma. Some say the rig's bottom is buried there before that, they say it started in the swamps of Louisiana, but who knows.

My good friend Wes and his crew were planning on taking this rig for drilling. When they moved in to Rig No. 908, after the boom went bust and things got slow, their rig was stacked in the yard. The boom went bust and things got slow, their rig was stacked in the yard. Wes hadn't seen anything like what happened after rigging up on that location. His son asked him when he had some free time to come over and see the rig. The rig was dark for a time, but Wes couldn't pass up the chance to see an old electric rig in eastern Oklahoma.

Wes thought it would be interesting to see the rig, but he wasn't sure if it was the right thing to do. He had heard stories about the Indian burial ground in eastern Oklahoma, but who knew if it was true. So, Wes decided to go and see the rig.

Wes arrived at the rig and was surprised by what he saw. The rig was dark and the area around it was deserted. Wes thought it would be interesting to see what was going on, so he decided to take a look.

Wes looked around the rig and saw that it was deserted. He thought it would be interesting to see if there was anything on the rig that could explain what was going on. He decided to take a look.

Wes walked around the rig and saw that it was deserted. He thought it would be interesting to see if there was anything on the rig that could explain what was going on. He decided to take a look.

Energy

It beggars belief that he found an undervalued field in the Permian with reserves of 775 million barrels of oil, worth $30 billion at today's prices. The fact that his petroleum engineering is so good that he can find oil in an area in which many experts think he has missed his chance is, mercifully, the limit of his success. The people who once owned the land on which the oil was found had let it go for $20 an acre, at a time when oil was not even worth $1 a barrel. When the company was drilling some 15 years ago, the well in question was described as a dud. The company, which has been selling off leases on the land in the last few years to raise money for its own operations, had put the property up for sale for $30 an acre. The oil was thought to be flammable Reach. All that was really known about the site was that it was a small field, with no history of success in the area.

Drillers found that if they pumped carbon dioxide into the field, the gas molecules would bond with the oil molecules to form a heavier molecule that was unable to rise to the surface. The bond was strong enough to increase the pressure of the oil, which rose to the surface. But there are still other ways to increase the pressure of oil, such as by using steam or water. One of the most promising methods is carbon dioxide flooding, which is being used increasingly by companies such as Chevron and Hess. The technique involves injecting carbon dioxide into the field, where it mixes with the oil and forms a new compound that is heavier than the original oil. This new compound is then pumped to the surface, where it can be sold for use in other industries.

Texas House OKs shifting control of fracking waste water

Thehouse OKs shifting control of fracking waste water

The Texas House of Representatives yesterday approved a bill that would give more control over the disposal of fracking waste water to the state. The bill was introduced by Representative sachan, who said it was needed because of the increasing amount of waste water being generated by the oil and gas industry. The bill also requires the state to develop a plan for how it will handle the waste water.

Steinberg was involved in the investigation, led by the Secret Service. The group discovered that the thieves were involved in the investigation, led by the Secret Service. The group discovered that the thieves had been using stolen credit cards to pay for their purchases, and that they had been using this method to make away with hundreds of thousands of dollars. The group also discovered that the thieves had been using the credit cards to buy luxury cars, jewelry, and other expensive items.

The court held that the law was constitutional because it was a valid exercise of Congress' power under Article I, Section 8, of the Constitution to regulate commerce with foreign nations. The court also held that the law was not an improper restriction of freedom of speech because it was not a prior restraint on speech. The court further held that the law was not a violation of the right to interstate commerce because it was not an improper restriction of freedom of speech because it was not a prior restraint on speech. The court further held that the law was not a violation of the right to interstate commerce because it was not an improper restriction of freedom of speech because it was not a prior restraint on speech.
